Dec. 2, 2016

**The Southwest Florida Water Management District urges year-round water conservation. Water levels may rise and fall, but our water resources remain limited. The District encourages efficient, non-wasteful uses of water to sustain our high quality of life. For more information about ways to conserve water, contact the District at 1-800-423-1476 or visit the District's website at [WaterMatters.org](http://WaterMatters.org)**

## November Water Resource Monthly Update

### Aquifer Levels

Regions **	Nov. 30 percentile***	Previous week percentile	Same date last year percentile	Normal range percentile****
North	43	47	73	25-75
Central	59	62	80	25-75
South	34	38	70	25-75

\* Aquifers are underground layers of rock and sand that hold water. In southwest Florida, more than 80 percent of the water supply comes from aquifers.

\*\* **North** (Citrus, Hernando, Lake, Levy, Marion and Sumter counties)  
**Central** (Hillsborough, Pasco, Pinellas and Polk counties)  
**South** (Charlotte, DeSoto, Hardee, Highlands, Manatee and Sarasota counties)

\*\*\* The **percentile** compares current aquifer levels to historical levels during the same time of year on a scale of 0-100. For example, the if groundwater level is at the 50<sup>th</sup> percentile, it means that half of the historical levels for this time of year were higher and half were lower than the current level.

\*\*\*\* Any level that falls between the 25<sup>th</sup> and the 75<sup>th</sup> percentile is considered **normal**. Less than the 25<sup>th</sup> would be considered below normal and above the 75<sup>th</sup> percentile is above normal.

NEWS RELEASE

**2016 Rainfall** (in inches) \*

	Nov. 30	Nov.	Jan-Nov	Jan-Nov
	Actual **	Historic Avg. ***	Actual	Historic Avg.
North	0.05	1.93	47.70	50.83
Central	0.04	1.81	54.61	50.19
South	0.06	1.76	56.18	50.54

**Historic Rainfall** (January - December in inches)

	2015	2014	2013	2012	2011	2010	2009	2008	2007	Jan-Dec
	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Actual	Historic Avg.
North	52.04	61.12	50.54	55.81	48.35	49.61	50.63	49.30	45.43	53.55
Central	57.27	56.16	47.92	50.30	53.44	49.29	51.56	46.64	41.44	52.31
South	54.24	52.57	52.64	47.36	46.40	48.61	48.84	47.37	38.53	52.31

\* The rainfall values for the current month and year are considered provisional and subject to revision. The other annual figures are final.

\*\* Actual rainfall for the time frame referenced at the top of the column.

\*\*\* Historical average rainfall for the time frame referenced at the top of the column. The District's historical rainfall records date back to 1914.

**Lake Levels** (in feet, relative to MLM) \*

Regions **	Nov. levels	Previous month	Same date last year
Northern	-0.44	-0.04	0.09
Tampa Bay	0.99	1.43	1.30
Polk Uplands	1.71	1.97	1.63
Lake Wales Ridge	0.53	1.10	0.28

\* Each month the District measures water levels in 76 lakes. The lake levels are compared to the lakes' adopted minimum low management (MLM) levels. The MLM level is how low each lake has historically dropped at the end of the dry season each year.

\*\* **Northern** (Citrus, Hernando and Sumter counties)

**Tampa Bay** (Hillsborough and Pasco counties)

**Polk Uplands** (Northern Polk County)

**Lake Wales Ridge** (Portions of Polk and Highlands counties)

**Streamflows** \*

	Nov. percentile **	Previous month percentile	Same date last year percentile	Normal range percentile ***
Withlacochee River near Holder	49	46	54	25-75
Withlacochee River near Trilby	75	79	56	25-75
Hillsborough River near Zephyrhills	54	87	72	25-75
Peace River at Arcadia	37	77	61	25-75
Peace River at Bartow	24	77	75	25-75

\* **Streamflow**, also known as discharge, is the volume of water passing a location in a certain amount of time, usually measured as cubic feet per second.

\*\* The **percentile** compares current flows to historical flows during the same time of year on a scale of 0-100. For example, if the river is shown at the 50<sup>th</sup> percentile, it means that half of the historical flows for this time of year were higher and half were lower than the current flow.

\*\*\* Any flow that falls between the 25<sup>th</sup> and the 75<sup>th</sup> percentile is considered **normal**. Less than the 25<sup>th</sup> would be considered below normal and above the 75<sup>th</sup> above normal.
